

Navigation:

- Make sure it's always visible on the front page- if the window is shorter you can't see it
- Have the nav stick to the top when you scroll down
- Replace scroll for more with a down arrow (if you can get icons to work), and have that be hidden after you start scrolling
- I like the glow effect on the buttons but I don't think they need to grow when you hover over them.

Body:

- Increase letter spacing and line height a little
- Increase font size a little
- Everything left aligned

Captions:

- Decrease font size a little

Images:

- At mobile device sizes have the images and text be in one column instead of side-by-side
- Increase contrast in images
- As the backgrounds get darker, have the images also get darker
